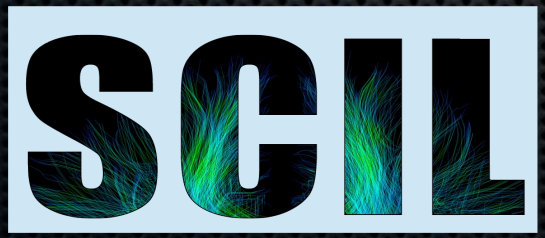
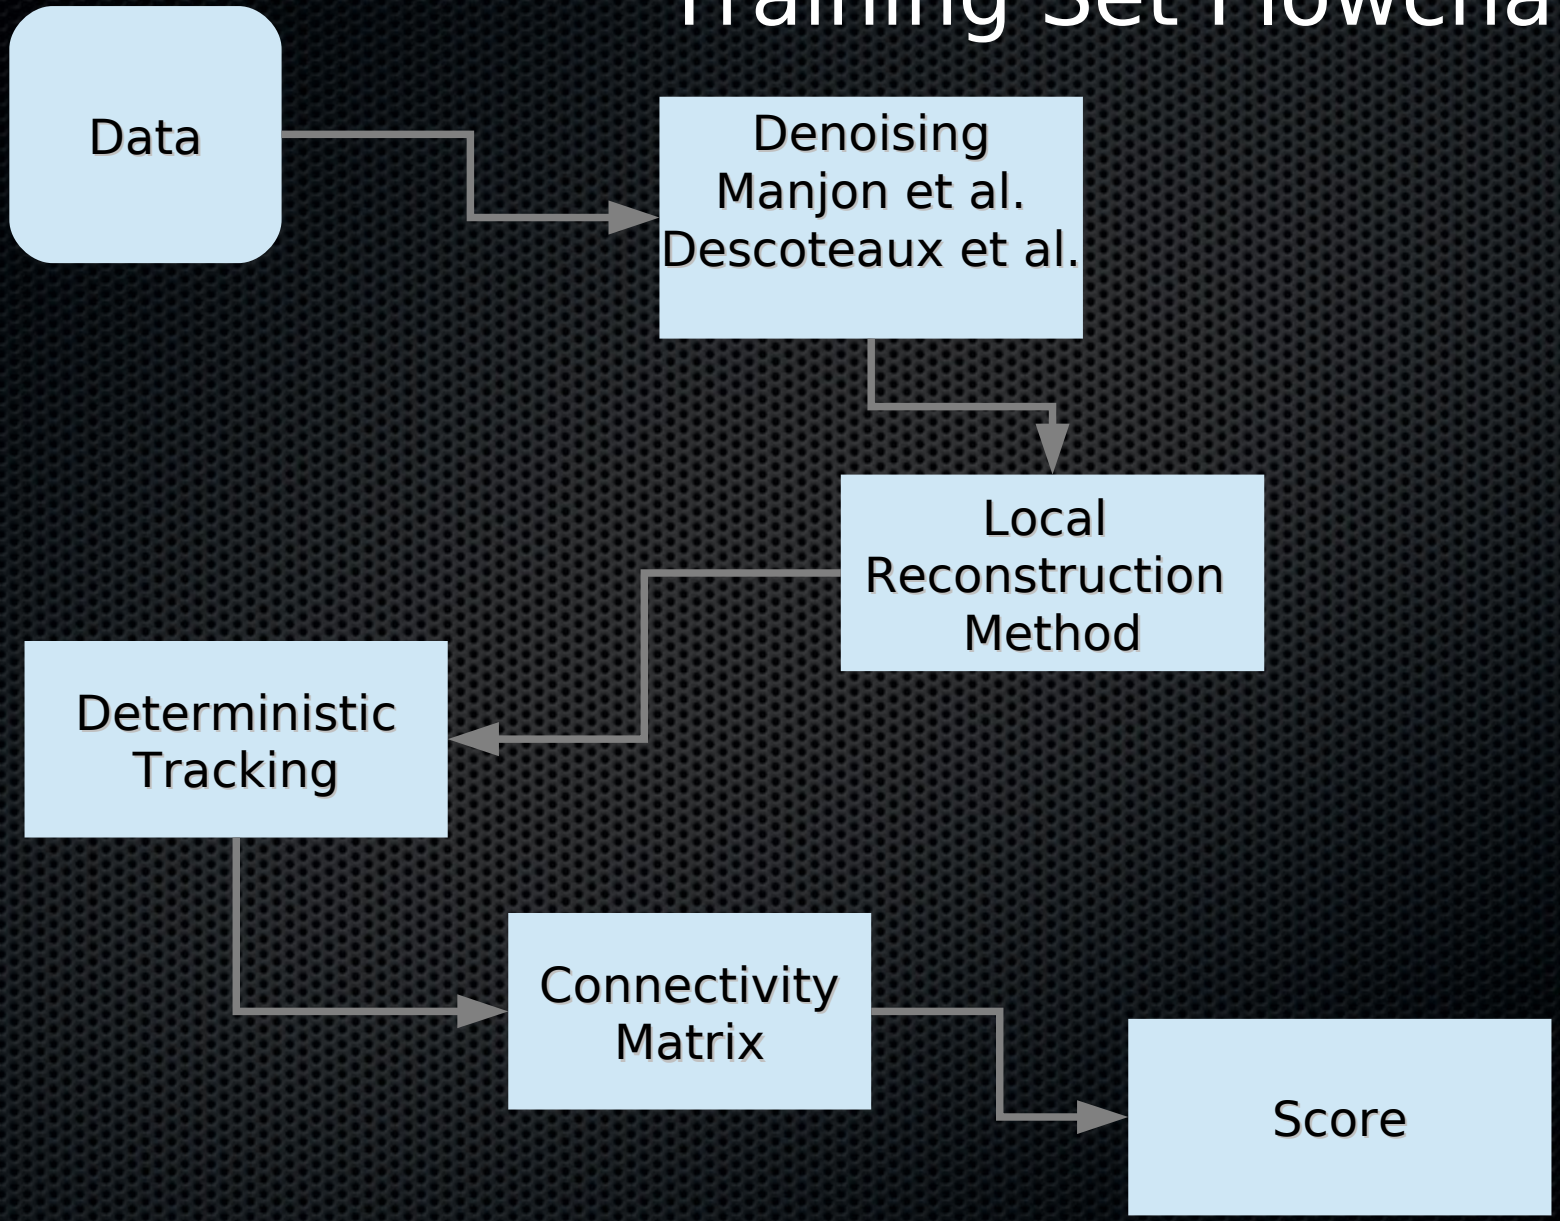
Evaluating 5 reconstruction methods in all three categories

Eleftherios Garyfallidis and Michael Paquette
Université de Sherbrooke,Quebec, Canada
scil.dinf.usherbrooke.ca



Training Set Flowchart



Local Reconstruction Methods

DTI/HARDI

CSD: Constrained Spherical Deconvolution

Tournier et al.

SDT: Spherical Deconvolution Transform

Descoteaux et al.

PSO: Multi-tensor with particle swarming.

Paquette et al.

Heavyweight

DSID: Diffusion Spectrum Imaging with Deconvolution

Canales-Rodriguez et al.

GQID: Generalized Q-sampling Imaging with Spherical Deconvolution

Garyfallidis PhD thesis

DSI real ODF

$$\psi_{DSI}(\hat{\mathbf{u}}) = \int_0^{\infty} P(r\hat{\mathbf{u}}) r^2 dr$$

Signal to Propagator relationship

$$S(\mathbf{q}) = S_0 \int P(\mathbf{r}) \exp(i2\pi\mathbf{q}\cdot\mathbf{r}) d\mathbf{r}$$

$$\downarrow \quad Q(\mathbf{r}) = S_0 P(\mathbf{r})$$

$$S(\mathbf{q}) = \int Q(\mathbf{r}) \exp(i2\pi\mathbf{q}\cdot\mathbf{r}) d\mathbf{r}$$

$$\downarrow \quad S(\mathbf{q}) = S(-\mathbf{q})$$

$$Q(\mathbf{r}) = \int S(\mathbf{q}) \exp(-2\pi\mathbf{q}\cdot\mathbf{r}) d\mathbf{q}$$

$$\downarrow \quad \text{cosine transform}$$

$$Q(\mathbf{r}) = \int S(\mathbf{q}) \cos(2\pi\mathbf{q}\cdot\mathbf{r}) \mathbf{q}$$

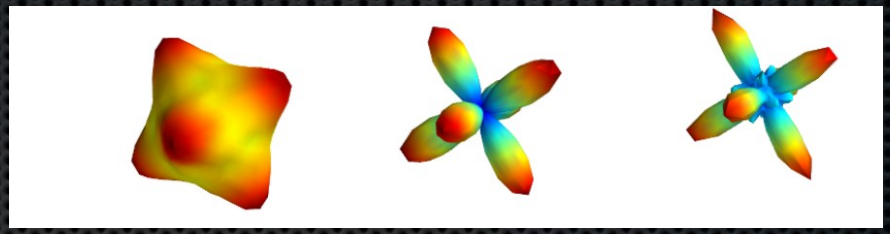
GQI2 real ODF

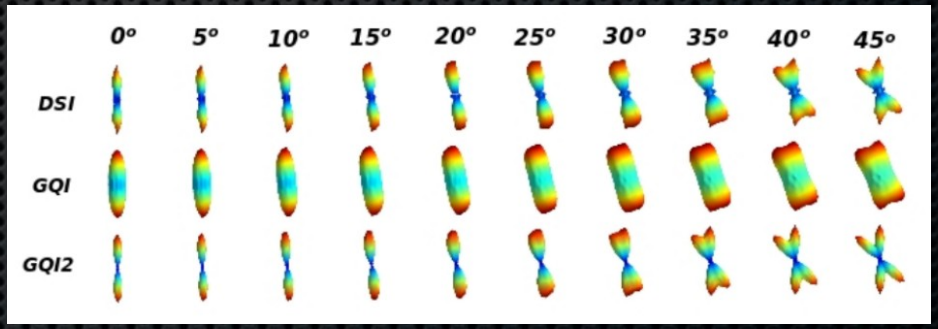
$$\psi_{GQI2}(\hat{\mathbf{u}}) = \int_0^{\lambda} Q(r\hat{\mathbf{u}}) r^2 dr$$

$$\psi_{GQI2}(\hat{\mathbf{u}}) = \lambda^3 \int S(\mathbf{q}) H(2\pi\lambda\mathbf{q}\cdot\hat{\mathbf{u}}) d\mathbf{q}$$

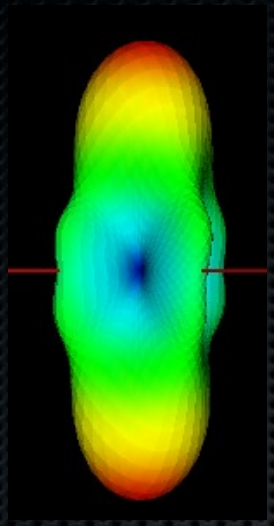
$$H(x) = \begin{cases} \frac{2\cos(x)}{x^2} + \frac{(x^2-2)\sin(x)}{x^3}, & x \neq 0 \\ 1/3, & x = 0 \end{cases}$$

GQI GQI2 DSI





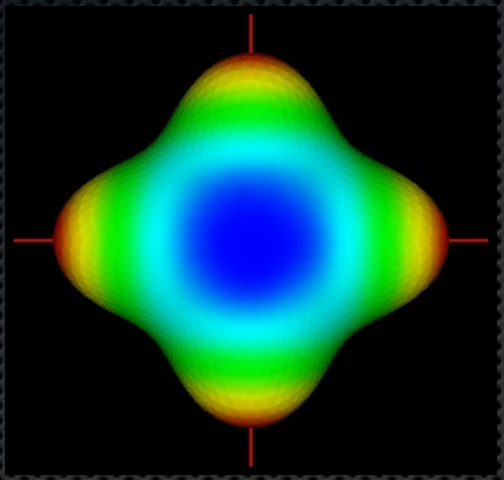
Spherical Deconvolution Transform



HARDI Signal

c_j

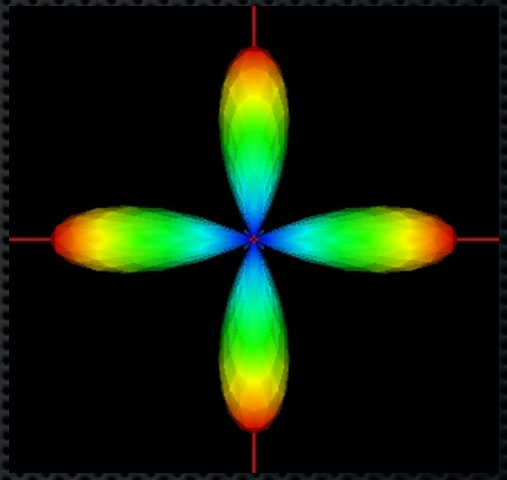
FRT



Diffusion ODF

$2\pi P_{l(j)}(0)$

Deconvolution sharpening transform



Fiber ODF

$1/ f_j$

GQI2 vs GQID

(GQI2 with deconvolution)

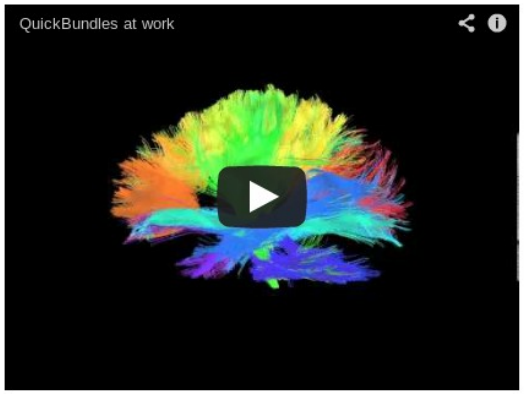
Diffusion Imaging In Python

Dipy is a **free** and **open source** software project for **diffusion** *magnetic resonance imaging* (dMRI) **analysis**.

Highlights

In Dipy we care about methods which can solve complex problems efficiently and robustly. QuickBundles is one of the many state-of-the art algorithms found in Dipy. It can be used to simplify large datasets of streamlines. See our examples and try QuickBundles with your data *examples_index*. Here is a video of QuickBundles applied on a simple dataset.



Announcements

- **Release!** Version 0.6.0 21/02/2013
- **Dipy 3rd Sprint**, Berkeley, CA, April 2013
- **ISBI 2013 will be based on Dipy**, February 2013

Getting Started

Here is a simple example showing how to calculate *color_FA*. We use a

Dipy Developers (Full list)

- Eleftherios Garyfallidis, University of Sherbrooke, QC, CA
- Ian Nimmo-Smith, MRC Cognition and Brain Sciences Unit, Cambridge, UK
- Matthew Brett, University of California, Berkeley, CA, US
- Bago Amirbekian, University of California, San Fransisco, CA, US
- Ariel Rokem, Stanford University, CA, US
- Stefan Van der Walt, Stellenbosch University, ZA
- Maxime Descoteaux, University of Sherbrooke, QC, CA
- Michael Paquette, University of Sherbrooke, QC, CA
- Christopher Nguyen, University of California, Los Angeles, CA, US
- Emanuele Olivetti, NeuroInformatics Laboratory (NILab), Trento, IT
- Yaroslav Halchenco, PBS Department, Dartmouth, NH, US
- Samuel St-Jean, University of Sherbrooke, QC, CA
- Your name here

We combine expertise in computer science, mathematics, psychology and medicine.

Mission

The purpose of dipy is to make it easier to do better diffusion MR imaging research.

- clearly written
- clearly explained
- a good fit for the underlying ideas
- a natural home for collaboration

We hope that, if we fail to do this, you will let us know and we will try and make it better.

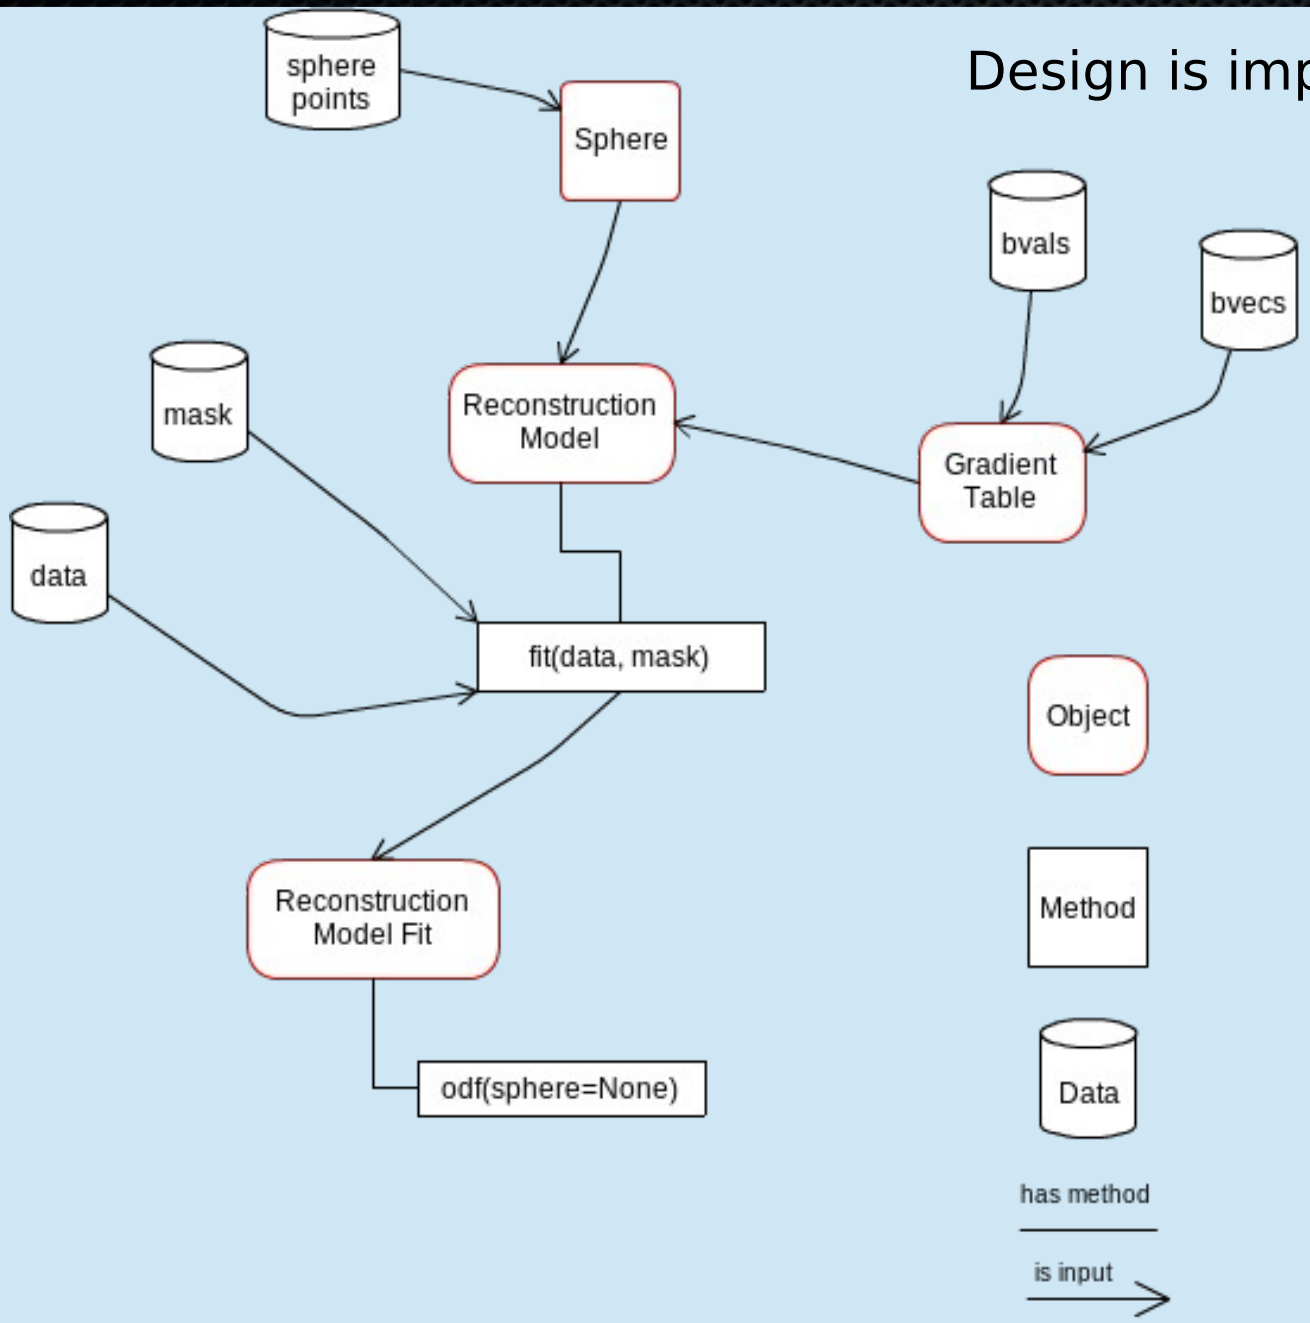
Design is important



List of algorithms

Reconstruction

- Diffusion Spectrum Imaging (Wedeen)
- Generalized Q-Sampling Imaging (Yeh)
- Diffusion Spectrum Imaging with Deconvolution (Canales-Rodriguez)
- Qball (Descoteaux)
- Constant Solid Angle (Aganj)
- Opdt (Tristan-Vega)
- Diffusion Tensor (Basser)
- Simulations
- ++ CSD + MultiTensor on their way.

Tracking

- Deterministic
- Probabilistic
- Statistics (length etc.)
- Streamline counts

Input / Output

- nifti
- dicom (partly supported)
- trackvis
- hdf5
- fast pickling
- numpy io

List of algorithms

Segmentation
- QuickBundles

Volume
- Fast volume traversal (ndindex)
- Reslice volumes

Registration
- Warp streamlines

And your module here

Get involved and share some code!

Dipy 0.6 is out.

Thank you!
